

# Capstone Project Design Description

Using either 1 – 2 paragraphs or a few bullet points, provide a design description for your planned approach to the capstone project. Think about the following:

- What classes do I need?
- How will those classes be related?
- What methods or functions do I need?
- What will the high-level user interaction look like?
- What modules will I use to break up a larger problem into smaller, more manageable chunks?
- What kind of data types should I use (if applicable)?
- What kind of input validation do I need?
- What is my test plan (i.e., what types of things will I test and how will I test)?
